

HORIZONTAL AIR FLOW FAN

BioTherm BAF-14, 20 Horizontal air flow fans provide enhanced air circulation throughout a growing space to aid plant health by uniformly distributing air, humidity and Co2. By enhancing air flow, growers can stamp out stagnant air pockets and utilize their dehumidifiers, Co2 systems and other climate control equipment more effectively. Given their aerodynamic design, growers can use these HAF fans more economically compared to basket-style HAF or oscillating fans.
